

# Module 3

## Introduction to Computational Methods for the Brain Sciences

### Module Overview

Cynthia Sandor

Edmond J Safra Assistant Professor  
UKRI Future Leader Fellow  
UK Dementia Research Institute Group Leader

# Welcome to Module 3 — Introduction to Computational Methods for the Brain Sciences

---

## Course Overview

- Hands-on introduction to Python/R for brain and health data
- Foundations of **data handling, visualisation, and reproducible workflows**

## Objectives

- **Understand computational techniques** used in brain sciences
  - Demystify tools and avoid “black box” thinking
  - Focus on *doing*, not just listening
- **Build core programming skills**
  - Programming fundamentals
  - Data manipulation and analysis
  - Basic pipeline development
- **Develop scientific reasoning**
  - Hypothesis formulation and testing
  - Basic inference and interpretation
- **Learn in context: Parkinson’s disease**
  - Work with clinical and omics-related datasets relevant to brain sciences

# Workshops Overview

- 4 workshops led by **Cynthia Sandor** (Python, stats, time-series, ML)
  - 2 workshops led by **Nathan Skene** (R + single-cell)
  - 1 workshop lead by **Martina Simplicio** (psychiatry) / Guest Session  
**Nir Grossman / Dr Nurun Fancy/ Dr Anna Mallach/ Dr Eugene Duff**
- Final Hackathon for assessment and integration of all skills

## Lecturers

Dr  
Cynthia  
Sandor

Dr Nathan  
Skene

Dr Martina  
Simplicio

Dr Nir  
Grossman

Dr Nurun  
Fancy

Dr Anna  
Mallach

Dr Eugene  
Duff

# Workshops Details

**Thursday 6 November** – Introduction to Python and Clinical Data in Parkinson’s Disease

**Friday 7 November** – Introduction to Statistical Analysis and EHR Data

**Monday 10 November** – Introduction to Time-Series Data (Wearable Devices)

**Tuesday 11 November** – Introduction to Machine Learning

**Wednesday 12 November** – Introduction to Single-Cell Datasets

**Monday 17 November** – Identifying Cell-Type Specific Effects in Genetic Disorders

**Tuesday 18 November**

**Morning:** Dr Martina Simplicio — *Psychiatry Applications: Cognitive Differences in Self-Harm*

**Afternoon:** Department of Brain Sciences — **Cutting-Edge Computational Neuroscience Showcase**

- Dr Anna Mallach — *Using Spatial Transcriptomics to Resolve Cellular Changes in Alzheimer’s Disease*
- Dr Nurun Fancy — *Single-cell transcriptomics: Uncovering the cellular story of neurodegeneration*
- Dr Eugene Duff — *Plasma Proteomic Evidence for Increased β-Amyloid Pathology Following SARS-CoV-2 Infection (Nature Medicine, 2025)*
- Dr Nir Grossman — *Sleep Onset as a Predictable Critical-State Transition (Nature Neuroscience, 2025)*

**Friday 21 November – Hackathon & Assessment**

# Psychiatry applications Workshops

Tuesday 18 November

This workshop aims to give an opportunity to all students to learn about some psychiatry research and how computational approaches can be applied to psychiatry. Further it aims to exemplify the relationship between experimental data and subjective experience in understanding psychopathology.

**9.30-10.45:** Dr Martina Simplicio & Ioanna Vamvakopoulou —  
*Understanding Cognitive Mechanisms of Self-Harm*

## 11-12: Lived Experience session

We will be joined via Teams by 2-3 young people from our Young People Advisory Group who will share their experiences of self-harm behaviour. Students will have the opportunity to ask questions.

**Note\*\*\*** The workshop will cover **sensitive topics** (self-harm behaviour, addiction, depression). In particular, the lived experience session may resonate or not with personal / friends / family difficulties. Students are encouraged to be mindful of this, to make sure they look after themselves as needed and to feel free to skip the Lived Experienced Session if they prefer, without any justification needed.

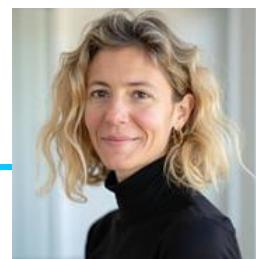

Dr Martina  
Simplicio

# Module Structure lead by me: W1 to W4

## Learning Philosophy

- Learn by doing: hands-on coding, real data, real problems
- Each day functions as a stand-alone workshop

## Daily Schedule

- 09:30 – 10:30 | Morning lecture — workshop introduction
- 11:00 – 12:30 | Programming tutorial — guided coding
- 13:30 – 16:00 | Challenge session — apply skills to a new dataset/problem
- 16:00 – 17:00 | Private study — consolidate learning

Dr  
Cynthia  
Sandor

## Format

- Programming tutorial: learn coding tools for different data types
- Challenge: apply what you learned to real data

## Support

- Work in groups of ~8 to encourage discussion and idea-sharing
- Code independently during challenge blocks
- TAs in person to answer questions — please make use of them
- Use Microsoft Teams to ask questions between sessions

## Solutions

- 

Notebook solutions shared the following day on Teams (MT)

UK Dementia  
Research Institute

# My Team

*My research group developed the tutorials and the hackathon.*

Dr Katarzyna  
Zoltowska

Marirena  
Bafaloukou

Anastasia  
Illina

Cecilia  
Rodriguez

Rishideep  
Chatterjee

*Teaching assistants: answer questions and assess the hackathon*

Antigoni

**Real-world Data Coding for Neuroscientists (ReCoN)**

MSc in Translational Neuroscience  
Department of Brain Sciences, Faculty of Medicine  
Imperial College London  
Autumn 2025

---

**Tutorials Overview**

Tutorial 1: Introduction to Python  
Tutorial 2: Statistics and Electronic Healthcare Records  
Tutorial 3: Time Series Data Feature Engineering  
Tutorial 4: Introduction to Machine Learning

---

**Module 3 — Digital Health Data Science Foundations**

Welcome to Module 3 of the *Real-world Data Coding for Neuroscientists (ReCoN)* course at Imperial College London. This module introduces the foundations of data handling, visualization, and reproducible workflows in Python. The course is **hands-on**, and students are expected to come prepared with a working Python setup.

- Solutions – Next Day

# Microsoft Teams Class: Example

The screenshot shows a Microsoft Teams channel named "General". At the top, there's a video camera icon with a dropdown arrow and a three-dot menu icon. Below the channel name, there are two buttons: "Post" (highlighted) and "Announcement". A user profile picture with initials "CS" and a green checkmark is shown next to the text "Post in channel".

**Saleem, Anas**  
Wednesday 11:34

How do i access the m3 kernel in VS?

**Chatterjee, Rishideep**  
Wednesday 12:14 Edited

**To access the m3 kernel in VS Code:**

- 1. Open your Jupyter notebook in VS Code** (either create a new one or open the test notebook)

# Assessment- Hackathon

Performance in solving a computational research problem under time pressure.

Assessment includes both individual and group components.

# Hackathon- Mission Example

*Longitudinal questionnaire data have been collected from >20,000 people at two timepoints. Half the participants were surveyed early in 2020 and then in Christmas 2020–21. The other half were surveyed in May 2020, mid lockdown, and then again in Christmas 2021, mid resurgence. A subset of the measures taken have been curated for you to analyse.*

## Work in groups to address scientific questions from the data

- Select a combination of questions to address
- Marks will relate to the number and difficulty of questions answered
- You have full access to the Internet and your notes during this assessment **but should not work across groups**
- Recommendations include (**but are not limited to**):

**Easy** | What demographic has been sampled in this study?

**Intermediate** | How does mental health relate to age & other variables at baseline or during the pandemic?

**Intermediate** | Has mental health changed during the pandemic?

**Difficult** | Which sub-populations have been most affected?

**Advanced** | To what degree can mental health be predicted from demographic and lifestyle variable

# Hackathon- Schedule

---

**Stage 1 — 09:30–09:50**

**Individual Planning**

- Task: Prepare and submit 2 individual slides 50%**
- Submission: via MT to TA

**Stage 2 — 09:50–14:00**

**Group Analysis**

- Task: Collaborative coding and data analysis  
We will provide a semi-empty iPython notebook via Github  
*(includes structure, headings, and cells — but students must fill in analysis)*
- Output: Submit group analysis code MT to TA 20%**
- Note: Coding stops at deadline

**Break 14h 14h30**

**Stage 3 — 14:30–15:00**

**Group Slide Preparation**

- Task: Create final presentation slides 8

**Stage 4 — 15:00–16:00**

**Group Presentations**

- Format: 8 min presentation + 2 min Q&A 30%**
